...measuring a sheet resistivity of a surface region including the implanted dopant particles of the monitor wafer;

determining a dose of the dopant bearing impurities; and

operating the implantation tool using one or more production wafers if the dose of the dopant particles in the monitor wafer is within a tolerance of a specification limit, as required by claim 1; and

introducing a plurality of particles within a depth of the material, whereupon the plurality of particles cause the crystalline material to be in an amorphous state;
